

QUALITY PRINT FINISHING

## DIE CUTTING FILES

REMEMBER your file will be imported directly into a CAD program.

CAD programs are designed to convert **any** information they find into some form of line. *Unnecessary, incorrect or superfluous information may cause the Forme to be faulty.*

- Tip #1.       **Strip out completely** any elements not required on the Forme.  
This includes any hidden or masked elements, any print information or embedded files.
- Tip #2.       If your Forme requires a mixture of Perforations and Scores.  
Send the **TEXT** instructions on a separate file.
- Tip #3.       Supply the file **PRINT SIDE UP** at all times. Annotate PSU on the file.
- Tip #4.       Ensure your Keyline is the **correct size** to fit your artwork.
- Tip #5.       **Indicate GRIP or FEED** direction on your file.
- Tip #6.       Files **MUST be Vectored** lines NOT Scans or JPEGs.
- Tip #7.       Files **MUST** be supplied in the following formats: -  
EPS, AI, PDF, DXF and IPD.
- Tip #8.       **DOUBLE-CHECK** that all elements are included in the file – such as  
business card slits.

**NOTE:** Neither Daroji nor our Forme maker will accept responsibility for incorrect files or inaccuracies related to your supplied artwork. For quoted jobs and orders Daroji is happy to provide advise, suggestions and technical expertise on Formes and Layout.  
*We do not provide this service unless we have Artwork and an Order.*
